DETAILED ACTION

Claims 1–7 are pending: Claims 5 and 6 are considered on the merits. Claims 1–4 and 7 are withdrawn from consideration as being drawn to a non-elected invention.

Election/Restriction

Applicant's election without traverse of Group II in Paper No. 8 is acknowledged.

Claim Rejections – 35 USC § 112

Claims 5 and 6 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventors, at the time the application was filed, had possession of the claimed invention.

Claims 5 and 6 claim compounds that are not disclosed in the body of the specification. Lack of disclosure of the identity of the compounds by means of elements such as structure which properly identify compounds, and which instead are claimed by functional features, is not sufficient description to show possession of the compounds at time of filing.

Claim Rejections – 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action: A person shall be entitled to a patent unless (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent, (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 5 and 6 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Maiorino *et al.* [U7].

The claims are directed to products of a process of screening for pharmaceutically acceptable inhibitors of PHGPx.

The references are relied upon as explained below.

Maiorino *et al.* disclose that oleate or deoxycholate are inhibitors of PHGPx. Oleate and deoxycholate are both pharmaceutically acceptable as they

Art Unit: 1651

have been administered to humans in the prior art, see Merck Index [U9] where deoxycholic acid has been used as a choleric.

Although, the claim is a "reach through" claim and is intended to include unknown and undisclosed compounds discovered by the process, the above reference is considered to be anticipatory in the absence of evidence to the contrary because the compounds disclosed in the reference are inhibitors of PHGPX.

It is well established that product-by-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps "[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).
